

FM-007 – Electric Vehicle

**FLEETMASTER
GROUP**

Course description

The course takes place at any suitable location selected by the booking manager.

Attendees are introduced to the technology behind EV development and gain an understanding of the vehicle's technology, controls and driving characteristics. Drivers will benefit from coaching and practical training around the various drive modes and regenerative braking to maximise the performance when driving the new Electric Vehicle. They benefit from the opportunity to experience driving an EV in different road environments across Urban, Rural and Motorways with comprehensive training around setting up the vehicle and leaving the vehicle, incorporating various charging methods.

Delivery is handled by our nationwide team of expert trainers, who use a blend of theory and on-road practical training to identify areas of concern in driver behaviour, advise on ways to improve and demonstrate a range of advanced driving and defensive driving techniques.

Digital assessment reports are accessible to employers post training and provide the detail of the training and a risk rating to help employers manage their ongoing risk removing the unknown.

Who is the course for?

Vehicle operators who will operate an Electric Vehicle to help familiarise them with the vehicle controls, drive modes, charging, range efficiency and key differences between an EV and an ICE vehicle.

Key facts

**Half Day
Full Day**

1 colleague per session

**Post course e-report emailed
